

# RADIALTÄTNINGAR

Radialtätningar är cylindriska läpptätningar med en eller flera tätningsläppar, varav mestadels en är fjäderbelastad. Lägesdelen är i regel ytterdiametern.

Radialtätningen används för avtätning av roterande axlar framför allt inom allmän maskinkonstruktion, i landtbruks och anläggningsmaskiner, inom drivmekanik elektroteknik samt vindkraftverk.

Fungerar i medierna mineraloljor, syntetiska oljor och smörjfetter.

Finns med gummi- eller metallmantel. Tätningsläppen är fjäderbelastad och finns även med separat dammtunga. Gummit är i nitril.

Finns även i andra material, söker du annat material eller dimension kontakta oss

Söker du en annat utförande eller annan dimension? Vi har kontakter med världsledande tillverkare av tätningar i en mängd olika utförande än det som presenteras här.

Kontakta oss:  
AB Sverull

Kontaktuppgifter hittar du på [www.sverull.se](http://www.sverull.se)

# RADIALTÄTNINGAR

**RA** Gummiklädd yttermantel, fördelaktig vid sämre ytjämnhet i läget, kompenserar förändringar i lägets diameter vid tex värmeutvidgning. Nödvändig vid avtätningar vid ytterdiametern.

**RAS** Utförande som RA men försedd med dammtunga som skydd mot yttre smuts och korrosion.

**RB** Plåtmantel, lätt och enkel att montera, mindre rist för monteringskador. Värmeutvidgning samt sämre ytjämnhet i läget kan dock medföra svårigheter för avtätning vid ytterdiametern.

**RBS** Utförande som RB men försedd med dammtunga som skydd mot yttre smuts och korrosion.

**RC** Plåtmantel, lätt och enkel att montera, mindre rist för monteringskador. Värmeutvidgning samt sämre ytjämnhet i läget kan dock medföra svårigheter för avtätning vid ytterdiametern. Helt inkapslad.

**RCS** Utförande som RB men försedd med dammtunga som skydd mot yttre smuts och korrosion.

**RASP** TryckbelastRAR upp till arbetstryck 10 RAr.

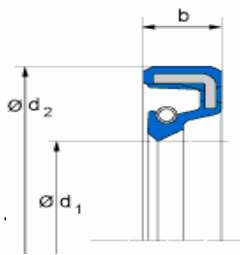

**RA** Utförande som RA men i materialet viton.

**RAS** Utförande som RA men i materialet viton. Försedd med dammtunga som skydd mot yttre smuts och korrosion.
